

Carbon Monoxide (CO)

Humberside Fire and Rescue Service actively encourage the public to fit a carbon monoxide alarm in the same room as carbon-based fuel burning appliances e.g. gas boilers, gas fires, oil, open fires and wood burning stoves.

Humberside Fire and Rescue Service **do not** supply or fit carbon monoxide detectors. Please visit our carbon monoxide website page for installation and further information <https://humbersidefire.gov.uk/your-safety/safety-in-the-home/carbon-monoxide>

Carbon Monoxide (CO) is a gas that can be produced in domestic premises by gas boilers, gas heaters and cookers, wood burning stoves, and open fires if these appliances are faulty or if they have been wrongly installed or maintained.

CO is a colourless, odourless, tasteless toxic gas that can have fatal consequences.

Humberside Fire and Rescue Service will:

- Educate our communities about the dangers of Carbon Monoxide gas.
- Promote awareness of the signs and symptoms of Carbon Monoxide poisoning within Safe and Well visits and using all our available media.
- Work with our Winter Warmth partners to give vulnerable people access to safe heating systems.
- In conjunction with our housing partners ensure tenants are aware of the obligations on landlords for annual gas checks.

For any concerns around gas safety call the National Gas Emergency Service on 0800 111 999.
